REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The Applicant claims a battery container comprising a front electrode plate operably attached to front opening of main body such that when front plate is in a closed position, an electrical connection can be achieved between the battery positioned within the enclosure and the first and second electrodes of the rear portion of the main body via the front electrode plate to provide an electric current tot the electric device; and wherein the main body is configured to selectively accommodate one battery or a set of batteries selected from a group consisting of two AA batteries, one CRV3 battery, and one customized rectangular battery, and wherein the main body includes a wrong-insertion preventing element for preventing incorrect insertion of the CRV3 battery into the enclosure of the main body, and the main body further includes another wrong-insertion preventing element for preventing incorrect insertion of the customized battery into the enclosure of the main body.

The prior art of record, Inoue et al., U.S. Pat. No. 4,645,325, teach a battery container comprising a main body defining a partial enclosure for accommodating at least one battery the rear portion having a first and second electrode to provide a contact with a first and second electrode of the battery, the main body further defining a front opening for receiving and discharging the battery, a front electrode plate attached to the front opening of the main body such that, when the front electrode plate is in a closed position, an electrical connection can be achieved between the battery within the enclosure and the first and second electrodes of the rear portion via the front electrode

plate to provide an electric current to the electric device; and wherein the main body is configured to selectively accommodate either two AA batteries or one CRV3 battery or one customized battery; and it teaches the main body further includes wrong-insertion preventing element for preventing incorrect insertion of the battery.

However, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a battery container wherein the main body includes a wrong-insertion preventing element for preventing incorrect insertion of the CRV3 battery into the enclosure of the main body, and the main body further includes another wrong-insertion preventing element for preventing incorrect insertion of the customized battery into the enclosure of the main body.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
